Introduction

This report details the basic requirements and design process of the website developed for the Emblem Books.

The purpose of the website is to provide information about services provided and list books available to buy from company.

System Requirements

The following functional and non-functional requirements will used for the system.

Functional requirements

1. Navigation and interactive elements must produce consistent results.
2. System must display list of books

Non-functional requirements

1. User interfaces must be aesthetically consistent.
2. System must conform to W3C standards.
3. System must be accessible and useable.
4. System must be fully responsive for desktop and mobile devices.
5. System must provide support for user-agents.

Prototyping

Prototyping demonstrates the functionality of the system.

Site Map

The site map shown in figure 1 represents the structure of the website.

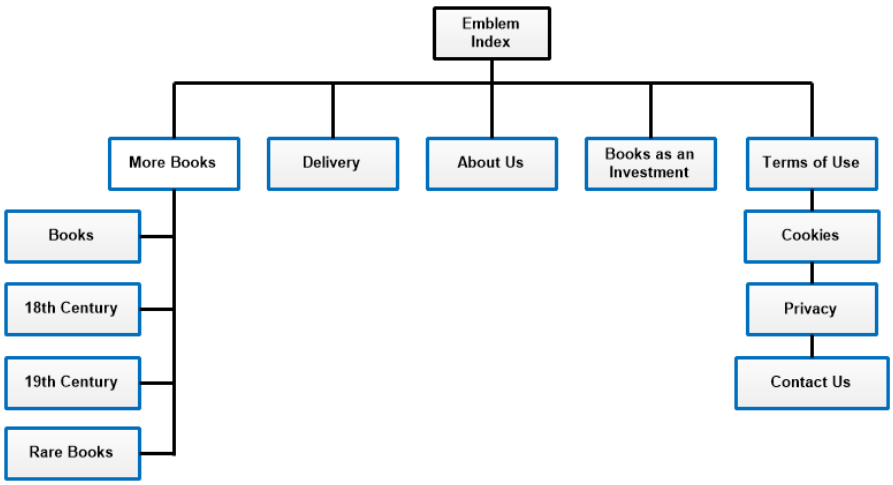

Figure 1. The site map for the website.

User Interfaces

The graphical user interface provides the necessary textual and visual information to assist in achieving the desired functionality.

Landing/Index Page

The landing page must display information about company services, a recommended book of the month and a promotional video.

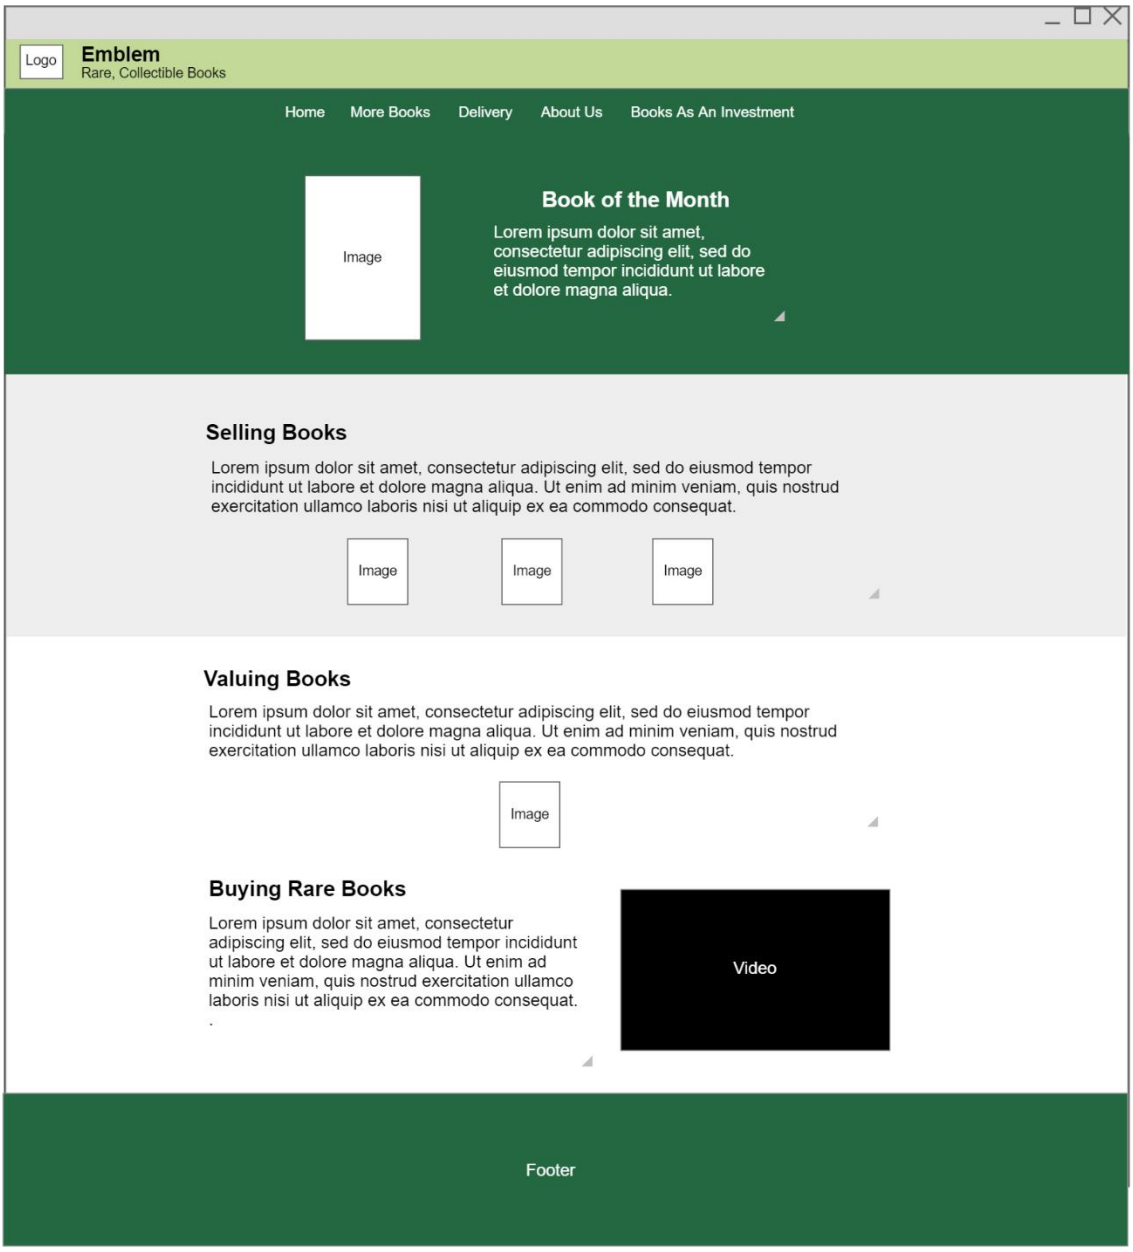

Figure 2. The Landing page for the website

19th Century Books Page

The 19th Century Books page **must** list the books available for purchase in this category.

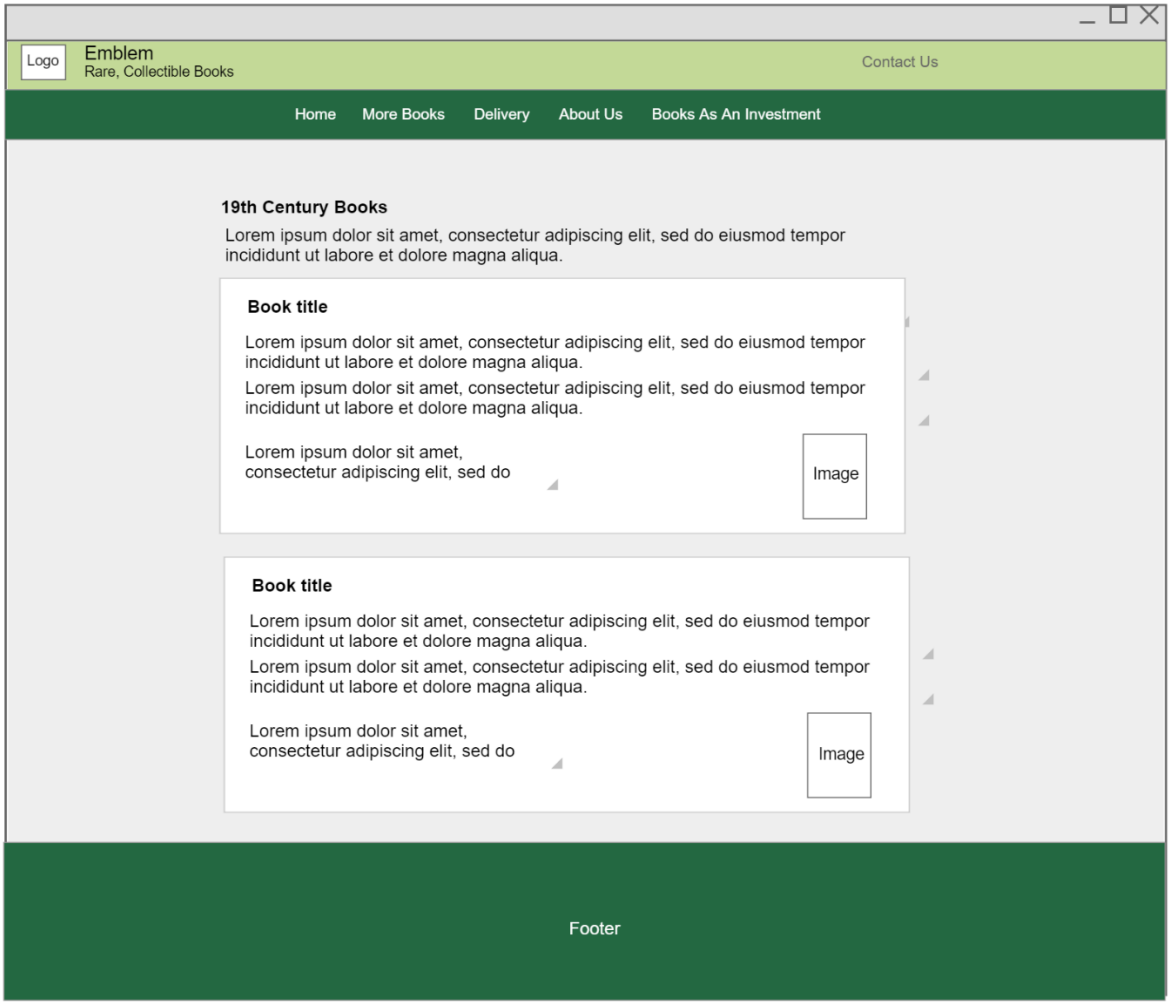

Figure 3. The 19th Century books page for the website.

Delivery Page

The Delivery page must display a table of information pertaining to pricing and delivery process.

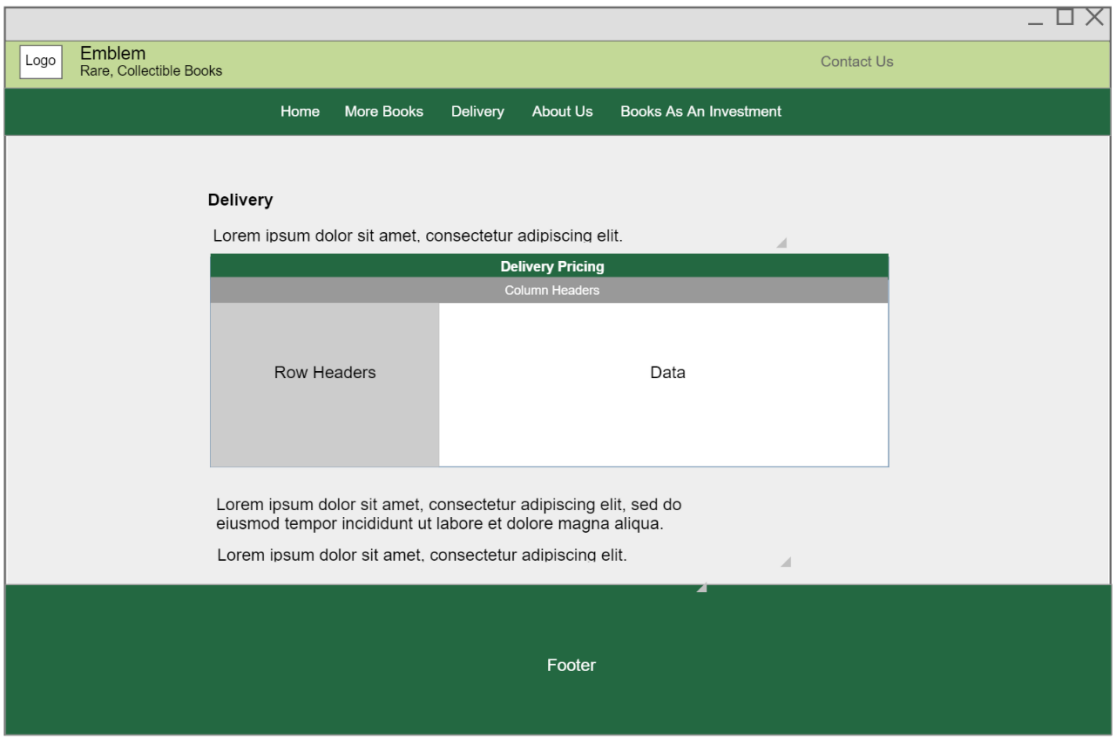

Figure 4. The Delivery page for the website.

Contact Page

The Contact page must display contact details for the company.

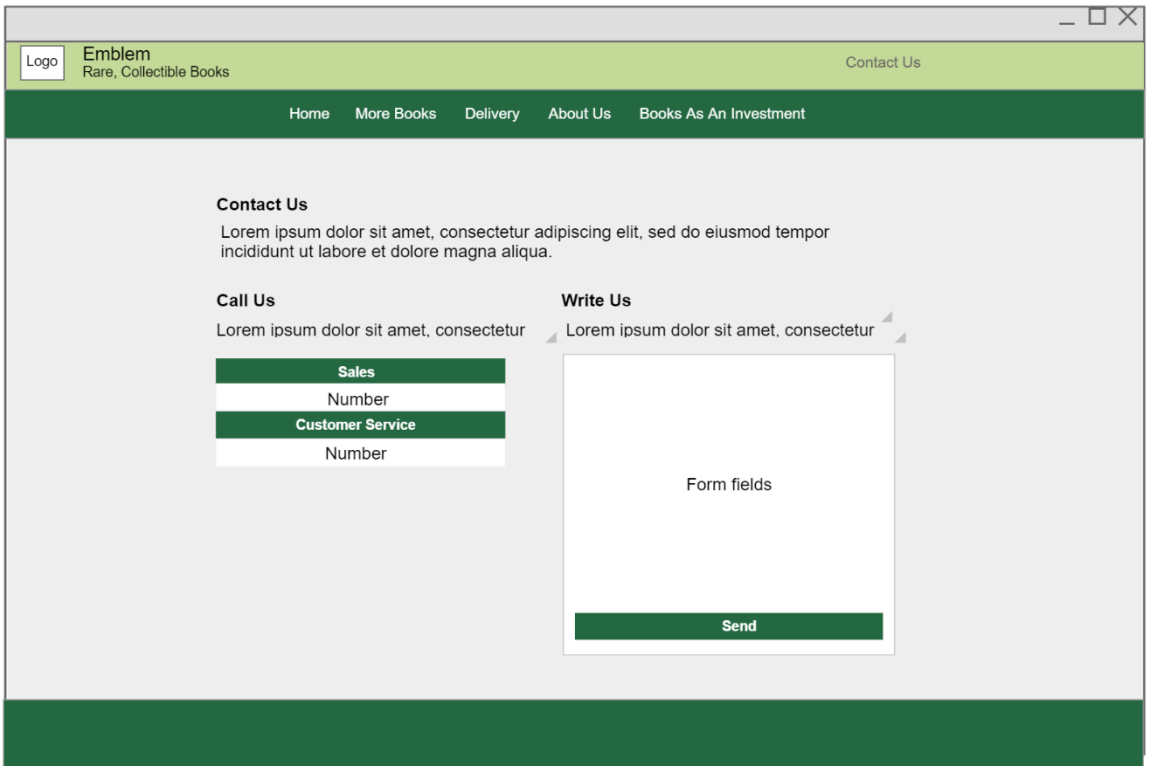

Figure 5. The Contact page for the website.

Implementation

The following technologies will be used to build the structure, presentation and functionality of the system.

Front-end

1. HTML5
2. CSS3
3. JavaScript
4. JSON
5. PHP
6. Krita
7. Maya

Technology	Usage
HTML5	Structure and layout of the web pages
CSS3	Styling and responsiveness of the web pages
JavaScript	Functionality for the website
PHP	Server functionality for website
Krita	Computer software used for images manipulation and creation
Maya	Computer software used for 3D modelling

Table 1. Technologies used for the front-end development.

Back-end

1. JavaScript
2. JSON

The technologies used for back-end development are detailed in table 2.

Technology	Usage
JavaScript	Retrieval of data from JSON
JSON	Structure of data to be displayed

Table 2. Technologies used for the back-end development.

Testing

The following tests ensure the website meets web standards, browser compatibility and accessibility.

Compliance

HTML5 and CSS3 have been validated and comply with W3C standards.

Accessibility

ARIA landmark roles, ARIA properties and skip links have been implemented to enhance website accessibility.

Browser Compatibility

All web browsers are tested for consistency and responsiveness. The test results are shown in Table 3.

Web Browser	Version	Result
Firefox	79	Pass
Chrome	84	Pass
Microsoft Edge	44	Pass
Internet Explorer	11	Pass
Opera	69	Pass
Safari	5.3	Fail Issue: Alignment and displaying of elements

Table 3. Test results for web browser compatibility.

Enhancements

Further improvements for the website are listed in table 4.

Task	Improvement
Implementation	• Implement additional links for the website. • Use of a database to store and retrieve data.
Browser Compatibility	• HTML5 shiv and other techniques should be used to make website compatible with older browsers

Table 4. List of recommended enhancements.
