Introduction

This report details the basic requirements and design process of the website developed for the Jamaica Travel.

The purpose of the website is to provide information about Jamaica and some of parishes that make up the island.

System Requirements

The following functional and non-functional requirements will used for the system.

Functional requirements

1. Navigation and interactive elements must produce consistent results.
2. System must display list of parishes on the island.
3. System must display map.
4. System must display location of parishes on map.
5. System must display location of user on map.

Non-functional requirements

1. User interfaces must be aesthetically consistent.
2. System must conform to W3C standards.
3. System must be accessible and useable.
4. System must be fully responsive for desktop and mobile devices.
5. System must provide support for user-agents.

Prototyping

Prototyping demonstrates the functionality of the system.

Site Map

The site map shown in figure 1 represents the structure of the website.

Figure 1. The site map for the website.

User Interfaces

The graphical user interface provides the necessary textual and visual information to assist in achieving the desired functionality.

Landing/Index Page

The landing page must display information about the Jamaica and a map to navigate the island. Each parish is displayed in a container with an accompanied picture and relating information.

Figure 2. The Landing page for the website.

Implementation

The following technologies will be used to build the structure, presentation and functionality of the system.

Front-end

1. HTML5
2. CSS3
3. JavaScript
4. Krita

Technology	Usage
HTML5	Structure and layout of the web pages.
CSS3	Styling and responsiveness of the web pages.
JavaScript	Functionality for the website.
Krita	Computer software used for images manipulation and creation.

Table 1. Technologies used for the front-end development.

Back-end

This is front-end project with no back-end technologies.

Testing

The following tests ensure the website meets web standards, browser compatibility and accessibility.

Compliance

HTML5 and CSS3 have been validated and comply with W3C standards.

Accessibility

ARIA landmark roles, ARIA properties and skip links have been implemented to enhance website accessibility.

Browser Compatibility

All web browsers are tested for consistency and responsiveness. The test results are shown in Table 2.

Web Browser	Version	Result
Firefox	79	Pass
Chrome	84	Pass
Microsoft Edge	44	Pass
Internet Explorer	11	Pass
Opera	69	Pass
Safari	5.3	Fail Issue: Alignment and displaying of elements

Table 2. Test results for web browser compatibility.

Enhancements

Further improvements for the website are listed in table 3.

Task	Improvement
Implementation	• Use of a database to store and retrieve data for services and completed work by company

Table 3. List of recommended enhancements.
