Introduction

This report details the basic requirements and design process of the website developed for the fictional London Travel.

The purpose of the website is to provide user with information about London city, things to do, transport and travel tips.

System Requirements

The following functional and non-functional requirements will used for the system.

Functional requirements

1. Navigation and interactive elements must produce consistent results.

Non-functional requirements

1. User interfaces must be aesthetically consistent.
2. System must conform to W3C standards
3. System must be accessible and useable
4. System must be fully responsive for desktop and mobile devices.
5. System must provide support for user-agents.

Prototyping

Prototyping demonstrates the functionality of the system.

Site Map

The site map shown in figure 1 represents the structure of the website.

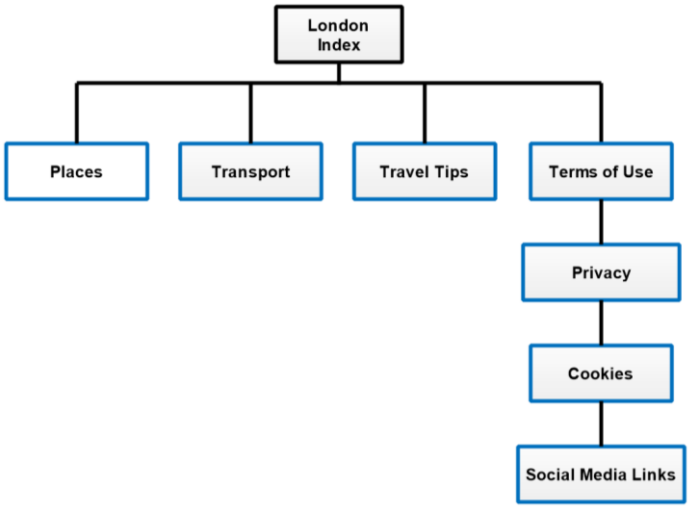

Figure 1. The site map for the website.

User Interfaces

The graphical user interface provides the necessary textual and visual information to assist in achieving the desired functionality

Landing/Index Page

The landing page must display information about London city and reviews from the London community.

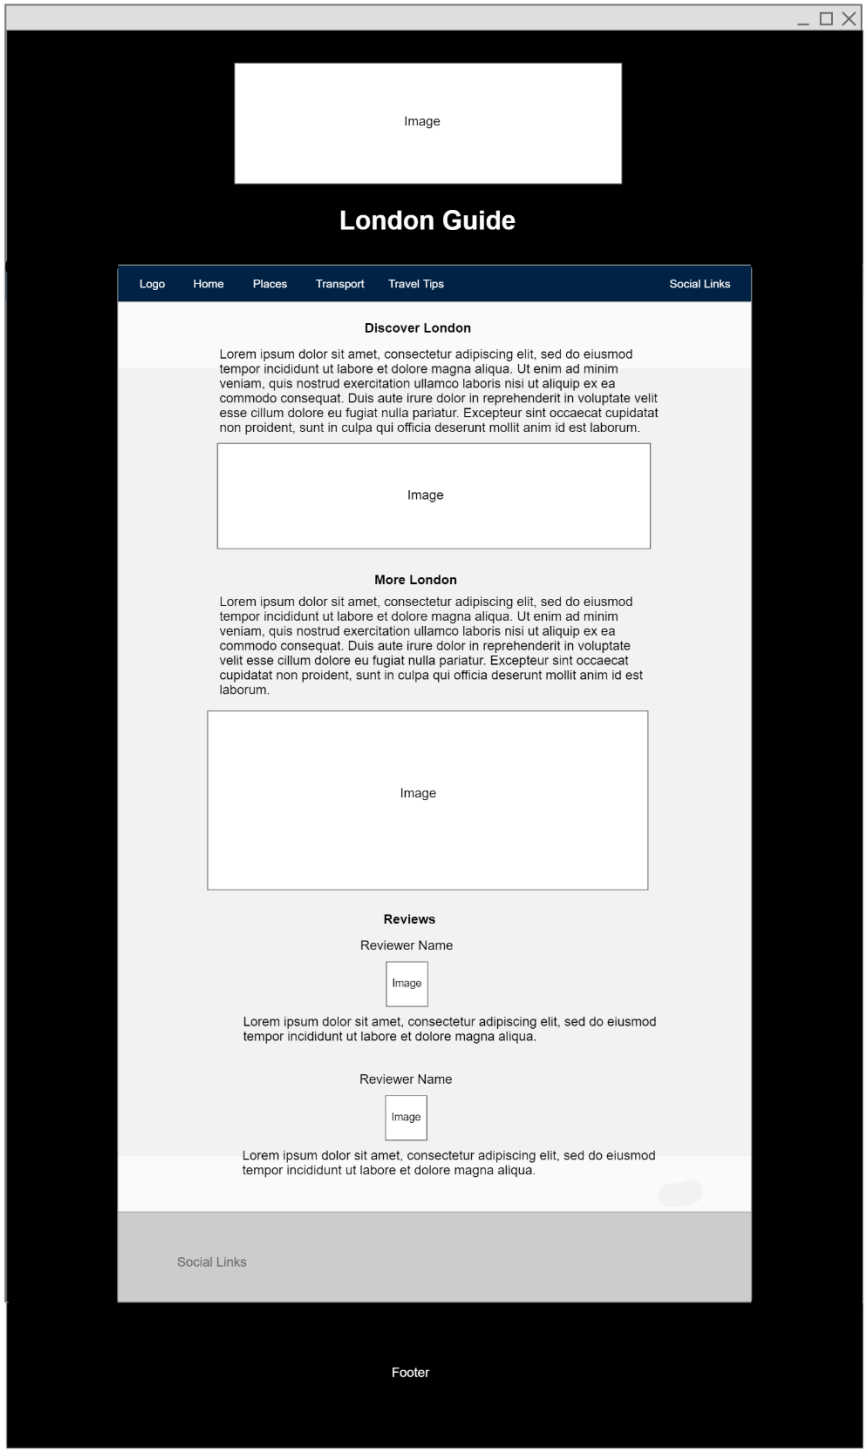

Figure 2. The Landing page for the website.

Places Page

The Places page must display information about things to do in London. Each attraction is displayed in a container with an accompanied picture and details of opening times and fees.

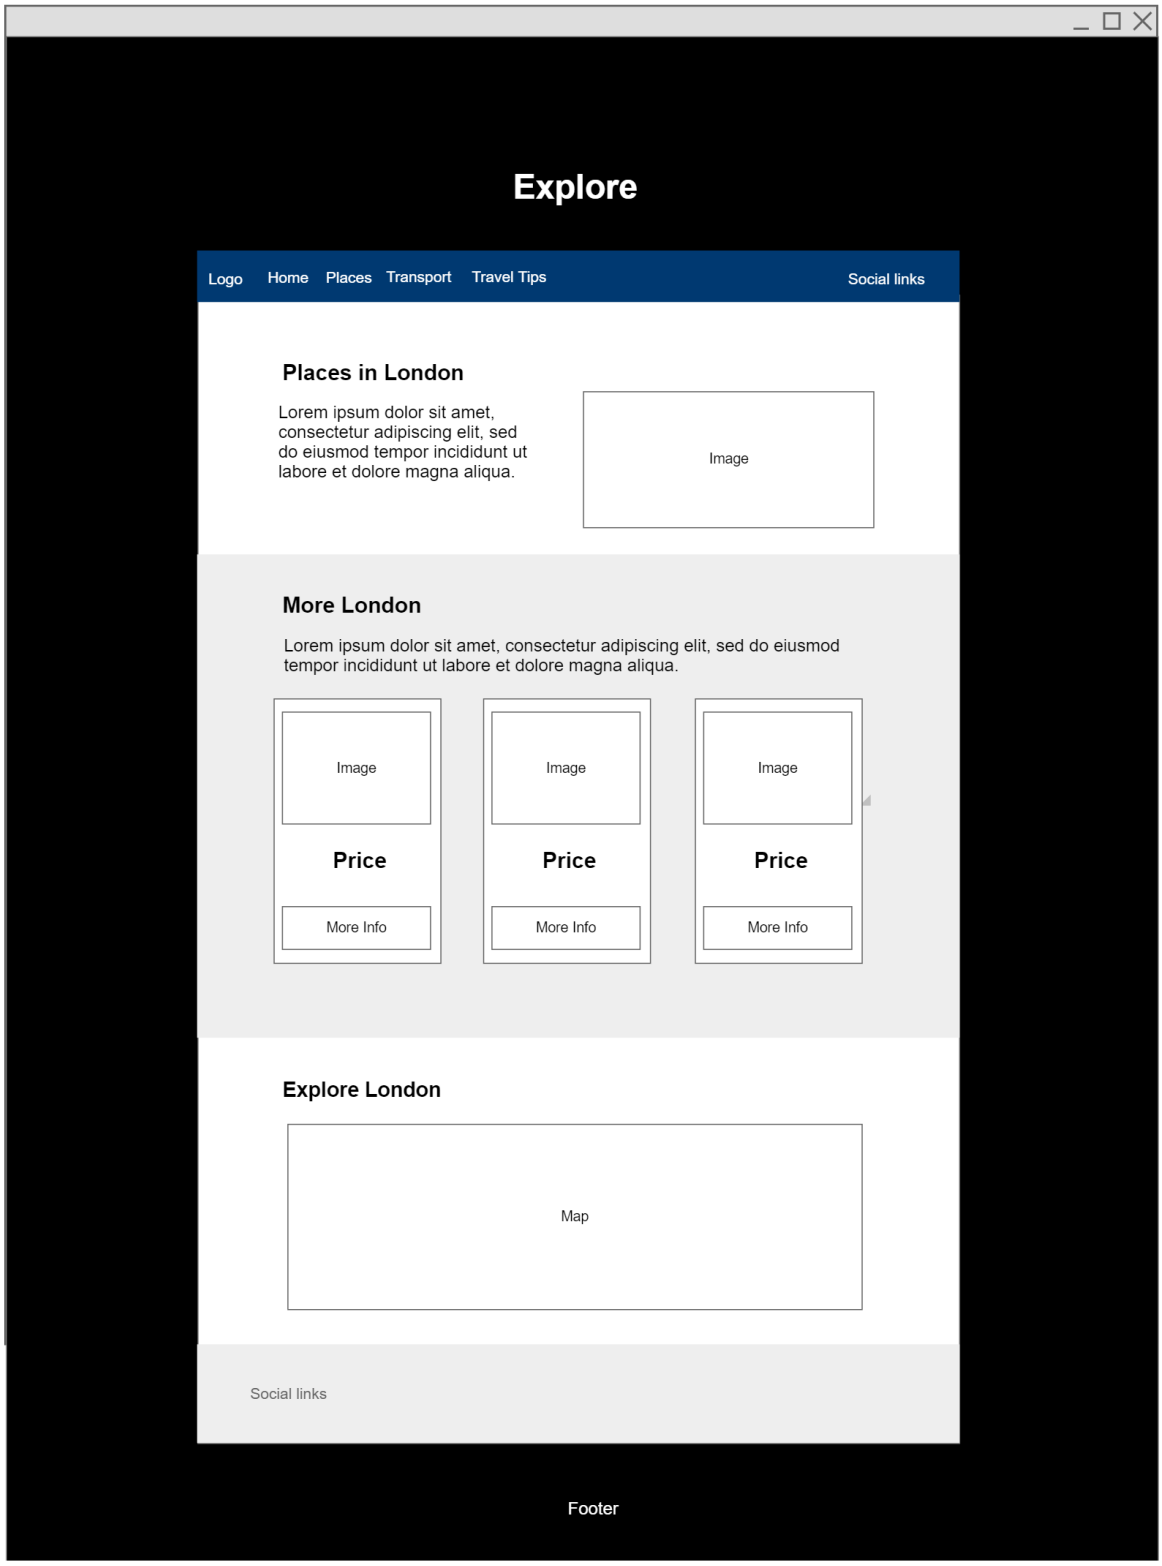

Figure 3. The Places page for the website.

Transport Page

The Transport page must display information relating to traveling n London. Each mode of transport is displayed in a container with an accompanied picture.

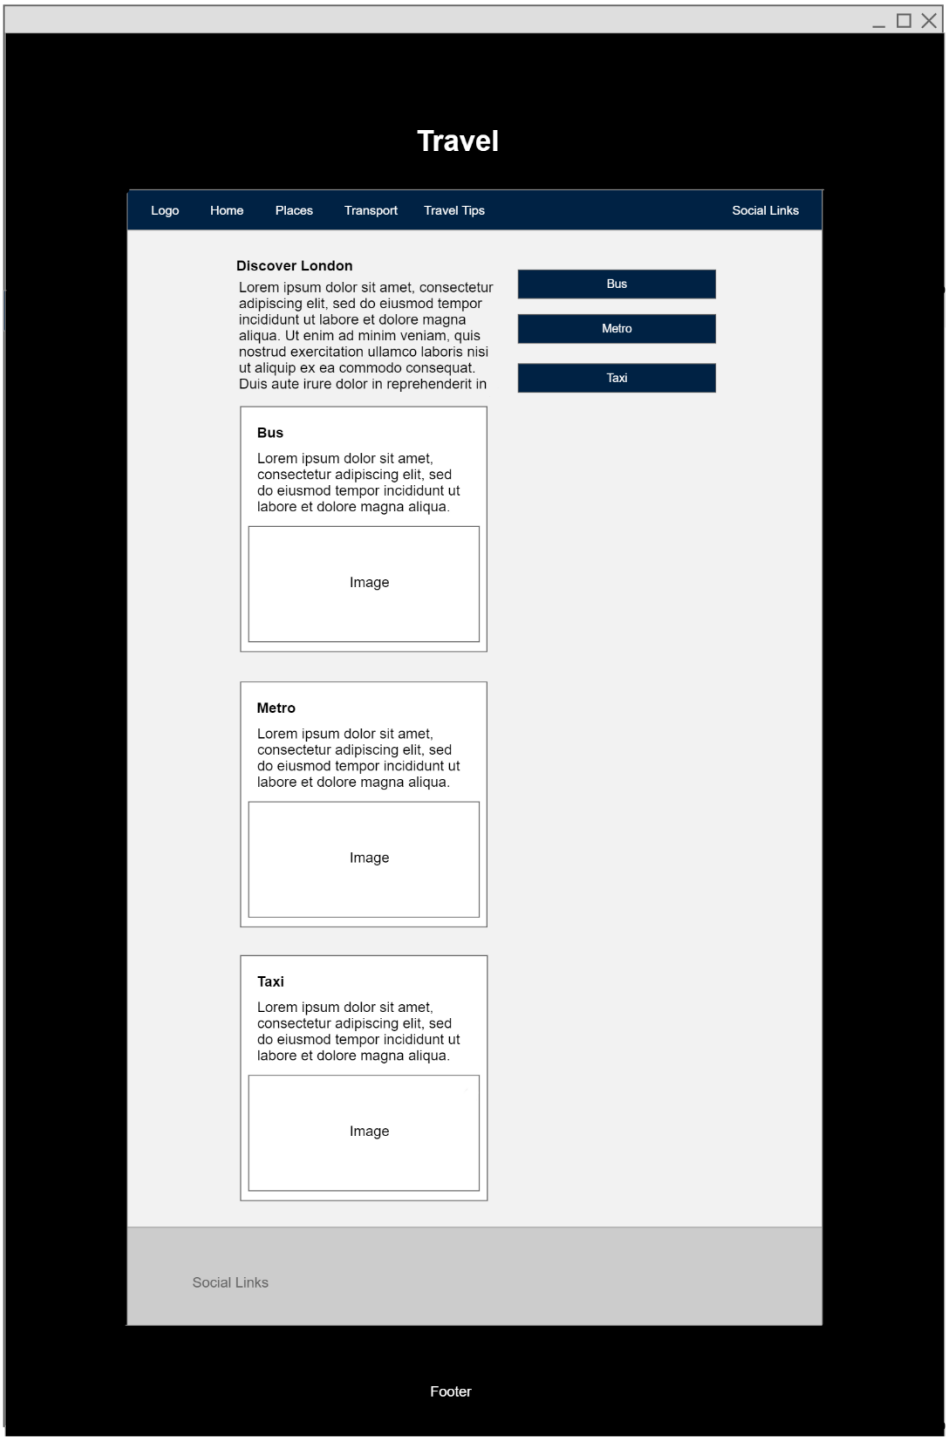

Figure 4. Transport page for the website.

Travel Tips Page

The Travel Tips page must display a list of top tips for traveling around London. Each tip with be displayed in an individual container.

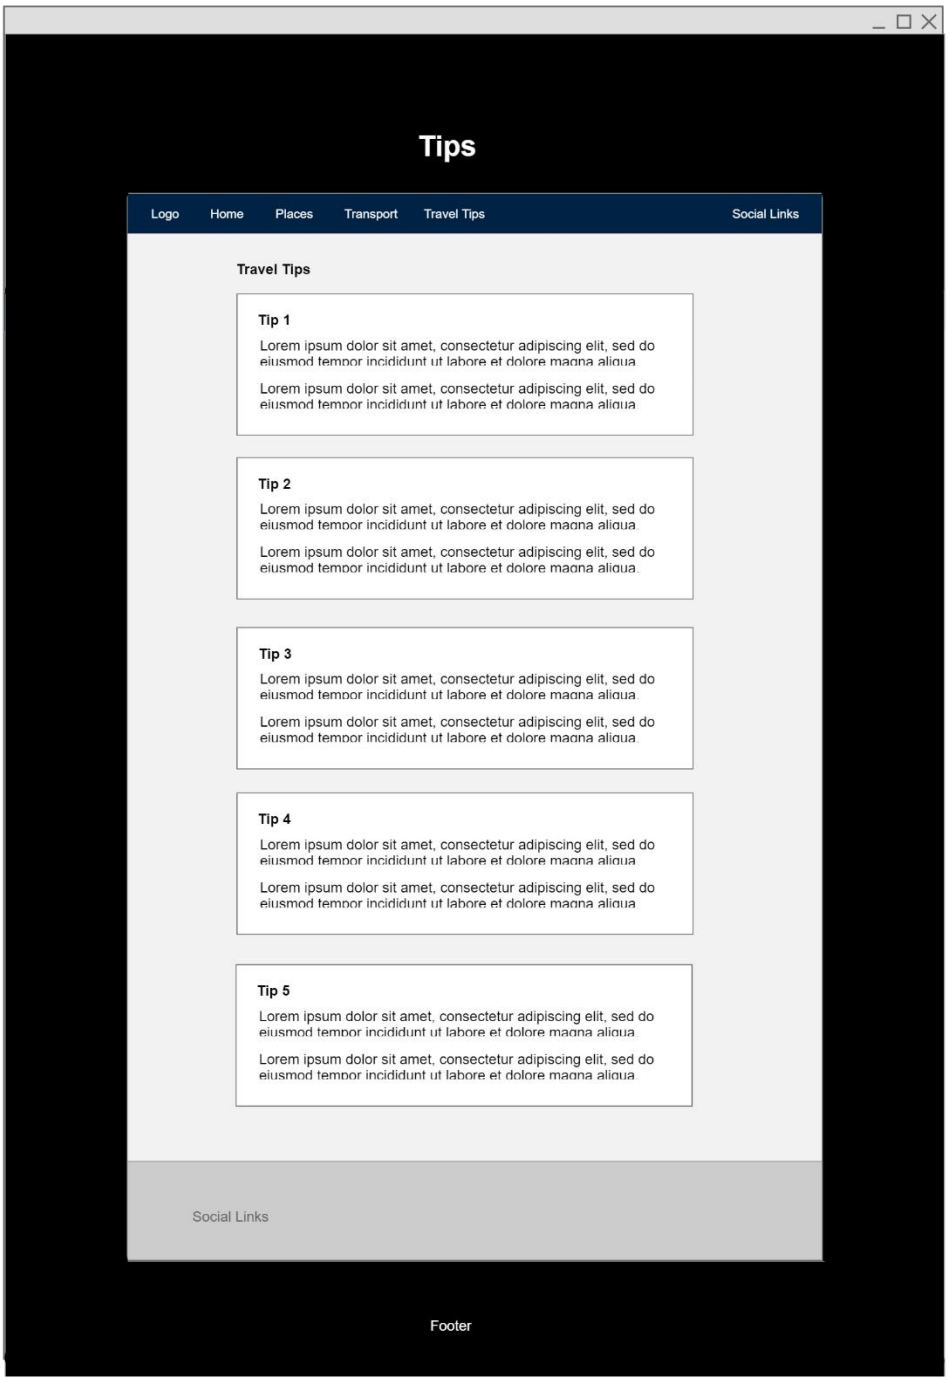

Figure 5. Tips page for the website.

Implementation

The following technologies will be used to build the structure, presentation and functionality of the system.

Front-end

1. HTML5
2. CSS3
3. JavaScript
4. Krita

Technology	Usage
HTML5	Structure and layout of the web pages.
CSS & W3.CSS	Styling and responsiveness of the web pages.
JavaScript	Functionality for the website.
Krita	Computer software used for images manipulation and creation.

Table 1. Technologies used for the front-end development.

Back-end

This is front-end project with no back-end technologies.

Testing

The following tests ensure the website meets web standards, browser compatibility and accessibility.

Compliance

HTML5 and CSS3 have been validated and comply with W3C standards.

Accessibility

ARIA landmark roles, ARIA properties and skip links have been implemented to enhance website accessibility.

Browser Compatibility

All web browsers are tested for consistency and responsiveness. The test results are shown in Table 2.

Web Browser	Version	Result
Firefox	79	Pass
Chrome	84	Pass
Microsoft Edge	44	Pass
Internet Explorer	11	Pass
Opera	69	Pass
Safari	5.3	Fail Issue: Alignment and displaying of elements

Table 2. The test results for web browser compatibility.

Enhancements

Further improvements for the website are listed in table 3.

Task	Improvement
Implementation	• Use of a database to store and retrieve data for services and completed work by company
Browser Compatibility	• HTML5 shiv and other techniques should be used to make website compatible with older browsers

Table 3. Test results for web browser compatibility.
