Introduction

This report details the basic requirements and design process of the website developed for a company Cafés in London.

The purpose of the website is to provide users with information about places to eat in London. A list of cafes will be displayed, along with a brief description, an image of the food served, and travel information for each café.

System Requirements

The following functional and non-functional requirements will used for the system.

Functional requirements

1. Navigation and interactive elements must produce consistent results.
2. System must display list of cafes.
3. System must display each café in a map.

Non-functional requirements

1. User interfaces must be aesthetically consistent.
2. System must be accessible and useable.
3. System must conform to W3C standards.
4. System must be fully responsive for desktop and mobile devices.
5. System must provide support for user-agents.

Prototyping

Prototyping demonstrates the functionality of the system.

Site Map

The site map shown in figure 1 represents the structure of the website.

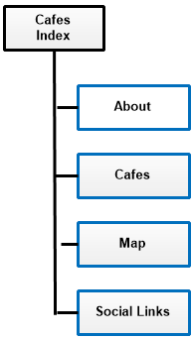

Figure 1. The site map for the website.

User Interfaces

The graphical user interface provides the necessary textual and visual information to assist in achieving the required functionality.

Landing/Index Page

The landing page will provide information about London and a collection of places to eat in the city. Each cafe will display a brief description, an image of food served and travel information. A map will display each café and the *location of the user.

*Note: *User must grant access to geolocation.*

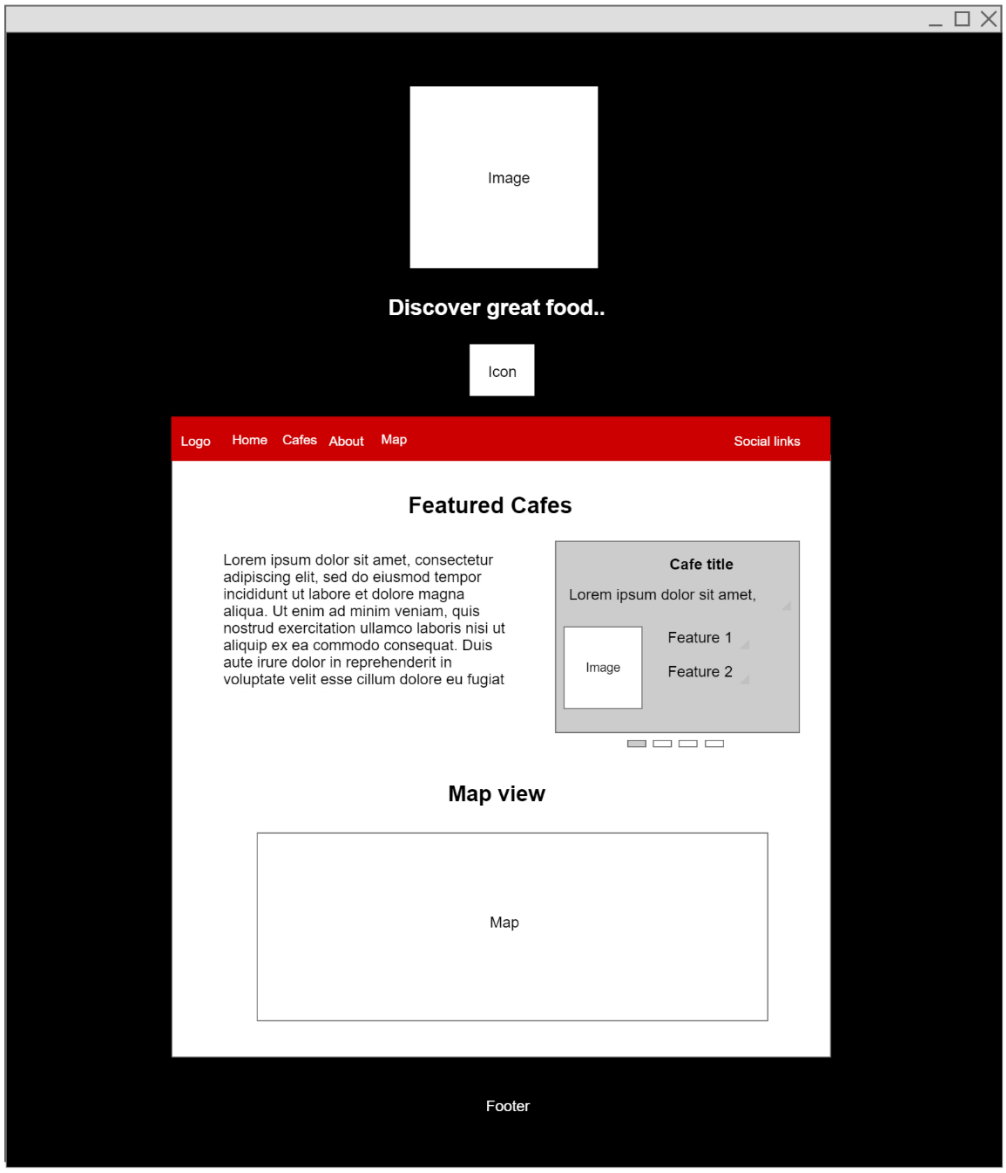

Figure 2. The Landing page for the website.

Implementation

The following technologies will be used to build the structure, presentation and functionality of the system.

Front-end

1. HTML5
2. CSS3 & W3.CSS
3. JavaScript & jQuery
4. PHP
5. Krita

Technology	Usage
HTML5	Structure and layout of the web pages
CSS3 & W3.CSS	Styling and responsiveness of the web pages
JavaScript & jQuery	Functionality for the website
PHP	Server functionality for website
Krita	Computer software used for images manipulation and creation

Table 1. Technologies used for the front-end development.

Back-end

1. JavaScript

Technology	Usage
JavaScript	Creation and retrieval of the data to be displayed

Table 2. Technologies used for the back-end development.

Testing

The following tests ensure the website meets web standards, is accessible and browser compatible.

Compliance

HTML5 and CSS3 have been validated and complies with W3C standards.

Accessibility

ARIA landmark roles, ARIA properties and skip links have been implemented to enhance website accessibility and usability.

Browser Compatibility

All web browsers are tested for consistency and responsiveness. The test results are shown in Table 3.

Web Browser	Version	Result
Firefox	79	Pass
Chrome	84	Pass
Microsoft Edge	44	Pass
Internet Explorer	11	Pass
Opera	69	Pass
Safari	5.3	Fail Issue: Alignment and displaying of elements

Table 3. Test results for web browser compatibility.

Enhancements

Further improvements for the website are listed in table 4.

Task	Improvement
User Interface	• Use images of higher quality
Implementation	• Use a database to store and retrieve café data
Browser Compatibility	• HTML5 shiv and other techniques should be used to make website compatible with older browsers

Table 4. Test results for web browser compatibility.
