Introduction

This report details the basic requirements and design for the website developed for Efexacademy.

Efexacademy is a company that provides companies with custom banners. The company specialise in design and printing large format banners.

The company has an existing website which lacks HTML5 mark-up and a responsive design.

System Requirements

The following functional and non-functional requirements will used for the system.

Functional requirements

1. Navigation and interactive elements must produce consistent results.

Non-functional requirements

1. User interfaces must be aesthetically consistent.
2. System must conform to W3C standards.
3. System must be accessible and useable.
4. System must be fully responsive for desktop and mobile devices.
5. System must provide support for user-agents.

Prototyping

Prototyping demonstrates the functionality of the system.

Site Map

The site map in figure 1 represents the structure of the website.

Figure 1. The site map for the website.

User Interfaces

The graphical user interface provides the necessary textual and visual information to assist in achieving the desired functionality.

Landing/Index Page

The landing must display information about the company, including contact details and testimonials from clients.

Figure 2. The Landing page for the website.

Contact Page

The Contact page must display contact details and all information pertaining to contacting the company.

Figure 3. The Contact page for the website.

Implementation

The following technologies will be used to build the structure, presentation and functionality of the system.

Front-end

1. HTML5
2. CSS3
3. JavaScript
4. PHP
5. Krita
6. Maya

Technology	Usage
HTML5	Structure and layout of the web pages.
CSS3	Styling and responsiveness of the web pages.
JavaScript	Functionality for the website.
PHP	Output of HTML code
Krita	Computer software used for images manipulation and creation.
Maya	Computer software used for 3D modelling.

Table 1. Technologies used for the front-end development.

Back-end

This is front-end project with no back-end technologies.

Testing

The following tests ensure the website meets web standards, browser compatibility and accessibility.

Compliance

HTML5 and CSS3 have been validated and comply with W3C standards.

Accessibility

ARIA landmark roles, ARIA properties and skip links have been implemented to enhance website accessibility and usability.

Browser Compatibility

All web browsers are tested for consistency and responsiveness. The test results are shown in Table 2.

Web Browser	Version	Result
Firefox	79	Pass
Chrome	84	Pass
Microsoft Edge	44	Pass
Internet Explorer	11	Pass
Opera	69	Pass
Safari	5.3	Fail Issue: Alignment and displaying of elements

Table 2. Test results for web browser compatibility.

Enhancements

Further improvements for the website are listed in table 3.

Task	Improvement
Implementation	• Use of a database to store and retrieve data
Browser Compatibility	• HTML5 shiv and other techniques should be used to make website compatible with older browsers

Table 3. List of recommended enhancements.
