Introduction

This report details the basic requirements and design process of the website developed for Mobile Car Repair Specialist.

Mobile Car Body Repair Specialist is a company that provides mobile services relating to car body repairs, such as dents, scratches, body respray and wheel refurbishment.

System Requirements

The following functional and non-functional requirements will be used for the system.

Functional requirements

1. Navigation and interactive elements must produce consistent results.
2. Must display completed work done by company.

Non-functional requirements

1. User interfaces must be aesthetically consistent.
2. System must be accessible and useable.
3. System must conform to W3C standards.
4. System must be fully responsive for desktop and mobile devices.
5. System must provide support for user-agents.

Prototyping

Prototyping demonstrates the functionality of the system.

Site Map

The site map shown in figure 1 represents the structure of the website.

Figure 1. The site map for the website.

User Interfaces

The graphical user interface provides the necessary textual and visual information to assist in achieving the required functionality

Landing/Index Page

The landing page must display information about the company, including inks for the Work and About page.

Figure 2. The Landing page for the website.

Services Page

The Services page must display information about the services provided by the company.

Figure 3. The Services page for the website.

Our Work Page

The Our Works page must display completed work by the company and include evidence of the process.

Figure 4. The Our Work page for the website.

About Us page

The About Us must display additional information about the company.

Figure 5. The About Us page for the website.

Contact Page

The Contact page must display information about way to contact the company.

Figure 6. The Contact page for the website.

Implementation

The following technologies will be used to build the structure, presentation and functionality of the system.

Front-end

1. HTML5
2. CSS3
3. JavaScript
4. Krita

Technology	Usage
HTML5	Structure and layout of the web pages
CSS3	Styling and responsiveness of the web pages
JavaScript	Functionality for the website
Krita	Computer software used for images manipulation and creation

Table 1. The technologies used for the front-end development.

Back-end

1. JavaScript

Technology	Usage
JavaScript	Structure and retrieval of the data to be displayed

Table 2. The technologies used for the back-end development.

Testing

The following tests ensure the website meets web standards, browser compatibility and accessibility.

Compliance

HTML5 and CSS3 have been validated and comply with W3C standards.

Accessibility

ARIA landmark roles, ARIA properties and skip links have been implemented to enhance website accessibility and usability.

Browser Compatibility

All web browsers are tested for consistency and responsiveness. The test results are shown in Table 3.

Web Browser	Version	Result
Firefox	79	Pass
Chrome	84	Pass
Microsoft Edge	44	Pass
Internet Explorer	11	Pass
Opera	69	Pass
Safari	5.3	Fail Issue: Alignment and displaying of elements

Table 3. The test results for web browser compatibility.

Enhancements

Further improvements for the website are listed in table 4.

Task	Improvement
Implementation	• Use of a database to store and retrieve data for services and completed work by company
Browser Compatibility	• HTML5 shiv and other techniques should be used to make website compatible with older browsers

Table 4. Test results for web browser compatibility.
