# Introduction

This report details the design, implementation and testing of the website developed for Parees Taylor Hairdresser.

Parees Taylor Hairdresser is a professional hairdresser who specialises in a variety of hair styling techniques for women.

# System Requirements

The following functional and non-functional requirements will used for the system.

## Functional requirements

1. Navigation and interactive elements must produce consistent results.
2. System must display each service provided by the company.

## Non-functional requirements

1. User interfaces must be aesthetically consistent.
2. System must conform to W3C standards
3. System must be accessible and useable
4. System must be fully responsive for desktop and mobile devices.
5. System must provide support for user-agents.

# Prototyping

Prototyping demonstrates the functionality of the system.

## Site Map

The site map shown in figure 1 represents the structure of the website.

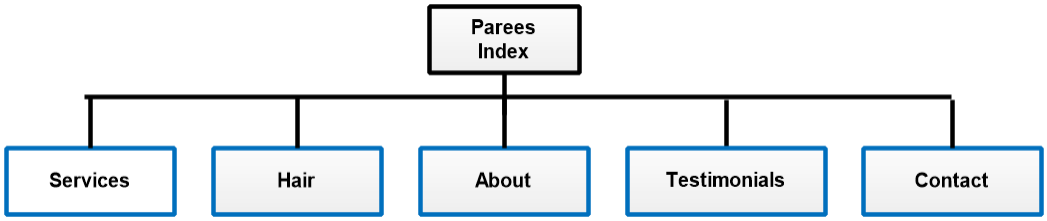

Figure 1. The site map for the website.

## User Interfaces

The graphical user interface for the website provides the necessary textual and visual information to assist in achieving the desired functionality

### Index / Landing Page

The Index page must display information relating to the company services, including testimonials and contact details.

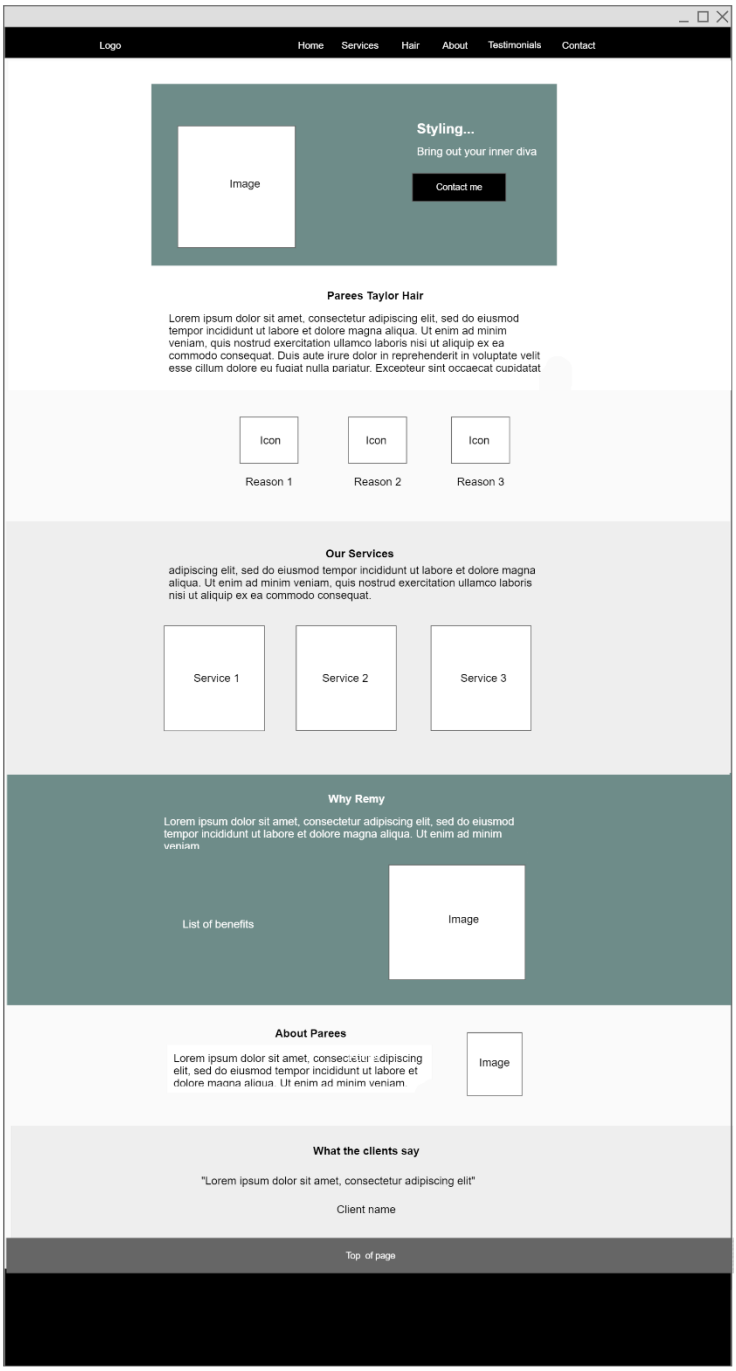

Figure 2. The Index page for the website.

## Implementation

The following technologies will be used to build the structure, presentation and functionality of the system.

### Front-end

1. HTML5
2. CSS3
3. JavaScript
4. Krita
5. Maya

| Technology | Usage |
|---|---|
| HTML5 | Structure and layout of the web pages. |
| CSS3 | Presentation and responsiveness of the web pages. |
| JavaScript | Functionality for the website. |
| Krita | Computer software used for image manipulation and creation. |
| Maya | Computer software used to create 3D models. |

Table 1. Technologies used for the front-end development.

### Back-end

This is front-end project with no back-end technologies.

| Technology | Usage |
|---|---|
| JavaScript | Creation and retrieval of data |

## Testing

The following tests ensure the website meets web standards, browser compatibility and accessibility.

### Compliance

HTML5 and CSS3 have been validated and comply with W3C standards.

### Accessibility

ARIA landmark roles, ARIA properties and skip links have been implemented to enhance website accessibility and usability.

### Browser Compatibility

All web browsers are tested for consistency and responsiveness. The test results are shown in Table 2.

| Web Browser | Version | Result |
|---|---|---|
| Firefox | 79 | Pass |
| Chrome | 84 | Pass |
| Microsoft Edge | 44 | Pass |
| Internet Explorer | 11 | Pass |
| Opera | 69 | Pass |
| Safari | 5.3 | Fail<br>Issue: Alignment and displaying of elements |

Table 2. Test results for web browser compatibility.

## Enhancements

Further improvements for the website are listed in table 3.

| Task | Improvement |
|---|---|
| Data storage | Use of a database to store and retrieve data |
| Browser Compatibility | HTML5 shiv and other techniques should be used to make website compatible with older browsers |

Table 3. Test results for web browser compatibility.
